

2018 SOUTH WEST NATIVE FOREST HARVEST PLAN
Northern zone – Full coupe details

Coupes associated with mining operations

Forest block	Compartment	Net plan area (ha)	Jarrah sawlog volume Grades 1 and 2 (m ³)
Various	Small pods mined within a total target area. Total area mined annually varies up to 1,000 ha.		7,500 <i>(Nominal estimate from annual trends and projected forest condition)</i>
Total		13,200	63,490

* Coupes depicted in Arcadia 03, Arcadia 04 and Mungalup 04 have been scheduled for harvest and are within the boundaries of possible extensions to the Wellington National Park.

Notes:

1. The net plan area is the coupe area less informal and other reserves set aside from timber harvesting. Within the area, detailed coupe planning will further reduce the area available to be harvested by retaining silvicultural exclusion zones and applying other constraints. Areas will be harvested to a range of silvicultural objectives including thinning, regeneration establishment (shelter wood) and regeneration release (gap creation).
2. The supply of other log products will be subject to demand.
3. Additional sawlog volume may be generated from clearing operations associated with utility construction, fencing, or other activities such as salvage from wildfire or storm events.
4. Harvesting operations in some coupes will extend beyond the twelve month period, so a portion of the log volumes will 'carry over' into the next year.
5. Rounding rules applied to the net area:
 Coupe size 0 – 5 hectares; rounded up to 5.
 Coupe size 6 – 99 hectares; rounded to the nearest 5.
 Coupe size greater than or equal to 100 hectares; rounded to the nearest 5.
