® Coupes wholly or partly comprised of young regrowth karri, scheduled for thinning operations. While these thinnings generate mainly chiplogs, some sawlogs may be available depending on the stand and operational settings.

Notes:

1. The net plan area is the coupe area less informal and other reserves set aside from timber harvesting. Within the area, detailed coupe planning will further reduce the area available to be harvested by retaining silvicultural exclusion zones and applying other constraints. Areas will be harvested to a range of silvicultural objectives including thinning, regeneration establishment (shelter wood) and regeneration release (gap creation).
2. The supply of other log products will be subject to demand.
3. Additional sawlog volume may be generated from clearing operations associated with utility construction, fencing, or other activities such as salvage from wildfire or storm events.
4. Harvesting operations in some coupes will extend beyond the twelve month period, so a portion of the log volumes will 'carry over' into the next year.
5. Rounding rules applied to the net area:
Coupe size 0 – 5 hectares; rounded up to 5.
Coupe size 6 – 99 hectares; rounded to the nearest 5.
Coupe size greater than or equal to 100 hectares; rounded to the nearest 5.
